SECTION 32 10 00
BASES, BALLASTS, AND PAVING

PART 1 - PRODUCTS

1.01 CAST-IN-PLACE CONCRETE PAVING

A. Cast-in-place concrete shall be Class D, air-entrained concrete conforming to the requirements and applicable provisions of Section 701 of the S.S.H.B. Minimum 28-day compressive strength shall be 4,000 psi. Concrete shall be air-entrained 5% minimum with a one (1") to three (3") inch maximum slump.

B. For all specifications other than above (4000 PSI), Concrete Paving shall conform to the materials, procedures, performance standards, formwork requirements, and all other specifications in Section 03 30 00, Cast-In-Place Concrete.
